FUMED VENEERS & ROUGH CUT VENEERS

"Fuming" wood (exposing wood to ammonia vapors) is a finishing technique that has been known for centuries. As the technique, which turns many woods dark, has gone in and out of fashion, the process has been enhanced and refined. Instead of leaving a piece of assembled furniture in a horse barn, where the horses' urine gave off ammonia, today lumber and veneer are fumed in large vacuum chambers; instead of just the surface of the wood being colored, the color now goes all the way through.

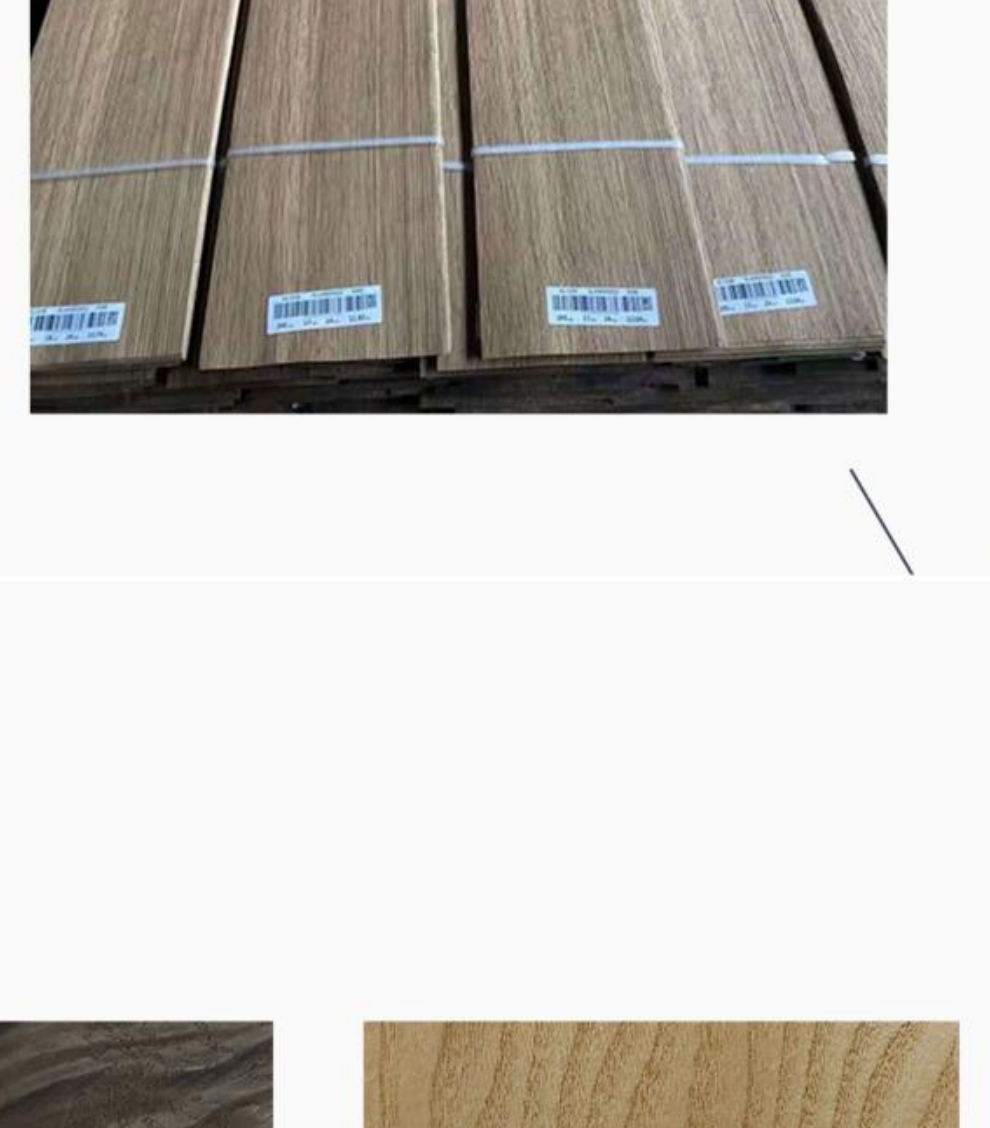

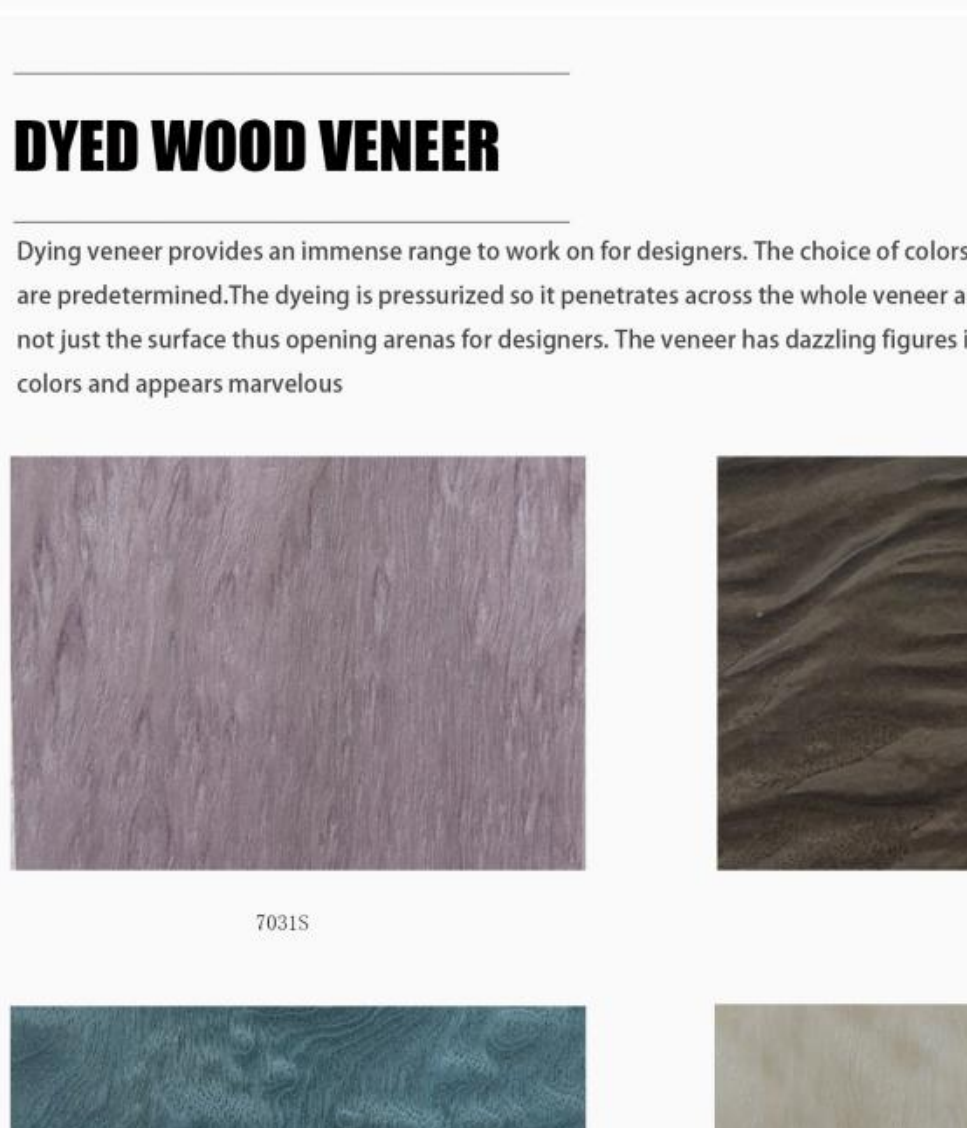

FUMED VENEERS & ROUGH CUT VENEERS

Rough Cut Veneers:
Rough cut veneers are manufactured in a way that the original look of a wooden plank is retained. A serrated blade is used to slice the veneers. This helps in maintaining the sawn wood like appearance. They are a great addition to modern furniture donning the distressed or shabby chic look.

DYED WOOD VENEER

Dying veneer provides an immense range to work on for designers. The choice of colors are predetermined. The dyeing is pressurized so it penetrates across the whole veneer and not just the surface thus opening arenas for designers. The veneer has dazzling figures in colors and appears marvelous
